

TASK – 6

Aim :

Given an integer, n , and n space-separated integers as input, create a tuple, t , of those n integers. Then compute and print the result of `hash(t)`.

Note: `hash` is one of the functions in the `_builtins_` module, so it need not be imported.

Input Format

The first line contains an integer, n , denoting the number of elements in the tuple.

The second line contains n space-separated integers describing the elements in tuple t .

Output Format

Print the result of `hash(t)`.

Code Implementation :

```
if __name__ == '__main__':  
    n = int(raw_input())  
    integer_list = tuple(map(int, raw_input().split()))  
    print(hash(integer_list))
```

Output :

✓ Test case 0

✓ Test case 1

Compiler Message

Success

Input (stdin)
